Lot Studio on your iPad: Photoroom's steps.

For Adam. One page. Same buttons, same words, same places as Photoroom on your iPad.

FOR ADAM · ZOLLER

Once, on your iPad

Open **driftedmarketing.com/studio** in Safari. Tap the Share button, then **Add to Home Screen**. From now on open **Lot Studio** from your Home Screen.

The first time, paste the sign-in link Umer texted you into **Paste your sign-in link** and tap **Sign in**. That switches on the real cutter. You never need the link again.

1 Add the shoot

Tap **Choose photos** and pick the shoot. There is no 250 limit; a whole box goes in at once. A counter shows how many are cut. You can close it any time and it carries on. Your original photos are never changed.

2 All photos at once

The bar under your photos is Photoroom's: **Resize**, **Position**, **Background**, **Shadows**. Every photo is already **Square**, **Center**, **2% padding** on white, so usually you change nothing. **Export N images** saves them all.

3 Fix one photo

- Tap the photo. Pinch and drag to frame it; two fingers turn it. **Done** saves what is in the frame.
- **Edit Cutout** → **Erase** → **Guided**, then tap your fingers. They are gone. Or tap **Without fingers** under **Cutout Suggestions**.
- It cut too much, like a book page? **Restore** → **Guided**, then tap or drag a finger across it.
- **Manual** is the brush, for the odd leftover bit. Pinch to zoom in.
- **Confirm**. The piece re-centres itself, so you do not have to.
- The arrows go to the next photo. **×** saves and takes you back to your photos.

Change the look on one photo and it asks **Apply to all** or **Just this one**, like Photoroom.

4 Lots and App 2 (when you want)

Number lots puts photos into lots, named "12 (1)", "12 (2)" in order. **Send to App 2** puts every lot straight into your inventory pool.

If something looks wrong

Text Umer. A screenshot is perfect.
